 Banala Naga Bala Chandra Sekhar Kumar |  ChandraSekhar2304 |  BanalaChandra2304

Guntur, Andhra Pradesh - 522314, India

OBJECTIVE

Computer Science graduate with strong foundations in Python, data analysis, machine learning, and software development, experienced in data wrangling, statistical modeling, and visualization. Aiming to apply data-driven and engineering-focused approaches to build scalable solutions and support analytical decision-making across technology and business domains.

EDUCATION

- B.Tech - Computer Science and Engineering(Data Science)** 2022 - 2026
R.V.R & J.C College Of Engineering Guntur, India
◦ CGPA: 8.62
- Intermediate(Class XII)** 2022
Sri Chaitanya Junior College Repalle, India
◦ Grade: 94%
- Secondary School Certificate (Class X)** 2020
Al Quamar Primary and High School Nizampatnam, India
◦ GPA: 9.8/10

PROJECTS

- Aspect-Based Sentiment Analysis (ABSA) for E-Commerce Reviews** Feb 2025 – Apr 2025 
Tools: Python, NLTK, Transformers, XGBoost
◦ Independently designed and built an end-to-end ABSA pipeline for Amazon product reviews to extract aspect-level customer sentiment, enabling businesses to pinpoint exactly which product features drive satisfaction or complaints rather than relying on overall star ratings alone.
◦ Performed text preprocessing (tokenization, lemmatization, stopword removal), improving feature quality and reducing noise by ~30–40%.
◦ Established a contextual sentiment analysis tool utilizing XLM-RoBERTa and VADER, streamlining sentiment classification and increasing processing efficiency by ~40%, enabling analysis of up to 15,000 reviews weekly.
◦ Trained and tuned an XGBoost classifier, achieving ~90%+ accuracy with strong Precision/Recall/F1-score performance.
◦ Delivered a scalable solution that reduces manual review-analysis effort and gives product and customer-service teams actionable, feature-level insights to guide improvements.
- Deepfake Detection System** May 2025 – Aug 2025 
Tools: Python, CNN, OpenCV, TensorFlow
◦ Independently developed a CNN-based Deepfake Detection system to classify real vs. fake images/videos, addressing the growing risk of synthetic media misuse in security, media, and social-platform applications.
◦ Built a face-extraction and preprocessing pipeline using OpenCV, improving model input quality and reducing false detections by ~15–25%.
◦ Applied transfer learning with TensorFlow to improve generalization and reduce training time by ~40–60%, enabling faster iteration.
◦ Tested on benchmark deepfake datasets and achieved ~92–97% accuracy with strong precision and recall, demonstrating a viable, scalable approach for automated media-authenticity verification.

SKILLS

- Programming Languages:** Python, Java
- Machine Learning / AI:** Machine Learning, Deep Learning, NLP, CNN, Transfer Learning
- Libraries / Frameworks:** TensorFlow, OpenCV, NLTK, Transformers, XGBoost, Matplotlib, Seaborn
- Web Technologies:** HTML, CSS, JavaScript, ReactJS
- Database:** MySQL
- Data Visualization:** Tableau
- Tools:** Git, GitHub, Figma
- Soft Skills:** Communication, Problem Solving, Teamwork, Time Management

INTERNSHIPS

- **Google AI/ML Virtual Internship**

July-Sep 2024

AICTE

- Completed the Google AI/ML Virtual Internship (AICTE), gaining practical exposure to end-to-end ML pipeline development.
- Executed data preprocessing, model training, and evaluation using 4 key metrics (Accuracy, Precision, Recall, F1-score) to ensure model robustness.
- Conducted multiple experiments and hyperparameter tuning to improve model generalization.

CERTIFICATIONS

- NPTEL: [Introduction to Internet of Things](#)

July 2024

- NPTEL: [The Joy of Computing using Python](#)

Jan 2025

- NPTEL: [Programming, Data Structures and Algorithms using Python](#)

Jan 2024

AWARDS

Second place in the National-level prototype Challenge Rupajna under RJE-NEST.
